

YOUR FIRST CHOICE FOR COLD CARGO

The Port of Halifax can safely and efficiently handle your temperature-controlled cargo.

- Significant infrastructure investments have been made at our two container terminals. We have doubled the number of reefer plugs to 1,000 and have made considerable electrical upgrades to support this initiative.
- The Port of Halifax is aligned with CN who is well positioned to support reefer growth. CN offers daily refrigerated rail service from Halifax to major markets in North America. To efficiently maintain their commitment, CN has invested in a brand new fleet of gen-sets.
- The Port of Halifax is connected around the world. With sixteen shipping lines currently calling on the Port of Halifax, cargo moves through thirteen trade routes world-wide.
- Halifax handles a wide variety of temperature-controlled cargo – from fruits and vegetables to seafood and pharmaceuticals.
- Atlantic Canada has a thriving export industry. Many of our natural resources are valuable overseas, and rely on an efficient refrigerated cargo supply chain to maintain this prosperous exporting service.

Choose our unmatched infrastructure and make Halifax your preferred port of call.

For more information on shipping your temperature-controlled goods through the Port of Halifax, please contact:
