

## **Sustainability Policy**

For the Halifax Port Authority (HPA), sustainability is the balance of economics, community integration and the environment. The HPA demonstrates its commitment to sustainability by conducting business in a way that meets the needs of the present while contributing to the well-being of the future.

We are working to better incorporate this balance into all aspects of our organization; to be a true economic development hub we must take a leadership role in environmental stewardship and community involvement. We are working to accomplish this by developing and implementing best practices and encouraging collaborative decision-making among industry, employees, and community partners.

Together, we are committed to incorporating sustainability into all aspects of our business by developing a sound strategy linked to the United Nations Sustainability Development Goals, taking into account those community and stakeholder interests that will enable us to excel as a Port and strengthen our community.

A handwritten signature in black ink, appearing to read "A. Gray", written over a horizontal line.
